

RFP # 9033: Business Telephone System & Voice Processing System – Questions and Answers - #3 (October 22, 2009)

Is the Power Plant in section 3.0 the same place as the Power Substation in section 3.1?

Yes

What is the requirement for OPX trunks in section 4.1 number 4?

Capability to access an outlying facility extension from the Municipal Government Complex or vice versa

Section 4.2 number 34, PFTs. How many PFTs do you require?

Each facility needs to have this capability so that they can function in the event of a power outage

Section 4.2 number 1, e911. Do you require that e911 software be priced and proposed? Or just want to know it exists in the platform? If the former, are your building multistory? How many doors or access doors could the emergency responders arrive at? If the former, do you, or local law require that in addition to DID extension number being sent to the PSAP, is room number also required/ requested? Is local notification of a 911 event required / requested?

The main need for this feature is to ensure that when a City telephone is used to call 911, the location/address of that building/facility shows up at the 911 center. Even if the telephone system is located at our main location, the address where the telephone is being made from has to be displayed.

What does the City use to archive emails?
